

USING THE eAML2 SERVICE

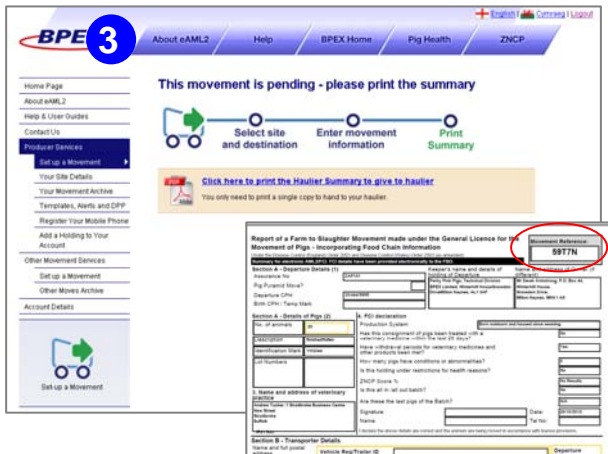

1. Your Services

Once logged into your account you can set up a movement straight away. Make sure you have confirmed 'Your Production Details' beforehand. You only need to do this the first time using the site.

2. Click on Set up a movement & select the relevant destination.

You can then choose the abattoir from the drop down menu. Click on 'new movement' & answer the questions in the new screen. Most of the information is already pre-populated or you can search for approved medicines and Red Tractor assured transporters.

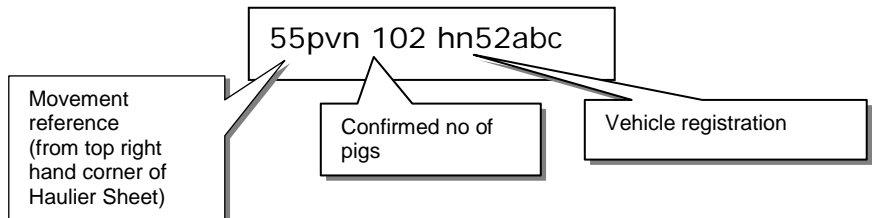

3. Printing the Haulier Summary document – Once you have clicked on 'submit movement' you need to print the 1 page pdf summary, which is automatically generated & hand this to your haulier or keep it yourself if self-hauling. This is legally required and the haulier retains this document for his records. The abattoir is emailed all the detailed information incl. FCI automatically on the day the consignment is due or every 10 minutes on the actual day.

4. Provide required feedback

You must confirm the actual number of pigs loaded & registration number of the transport for your pigs on the same day otherwise your movement can't be sent to the Government movement database.

To confirm you can either send a text message or return to your eAML2 online account on the same day where you will see the movements requiring feedback automatically.

Register your mobile phone(s) to confirm the actual number of pigs and the registration of your transporter by text message. The format of the text message is simple; it can be upper or lower case. You will always get an 'error' or 'ok' message when you have sent your text:

5. Movement Archive – This is where all of your movements are safely archived online for the legally required period of three years.
